PAY ON FOOT MACHINE

When Secom installed its first Pay on Foot machine nearly 10 years ago the company knew that the system would evolve. The machine designed for a shopping center in the UK would not be accepted in the US. Different cultures and a different money system meant the machine had to grow to fit the marketplace. And it did...

## Features

- Through the wall and stand alone mounting. The machines can be mounted in their own double wall stainless steel housing or in a "through the wall application." Convenient front opening access means easy service, quick collection of money and tickets, and ease of access to change dispensers.
- Field programmable coin units. New coin. No need to send the coin mechanisms to the factory for reprogramming. The new coins can be easily added to those recognized by the technician in the field.
- Highest quality bill acceptors and dispensers. Likewise the bill acceptors are field programmable. New banknotes being issued – not a problem. Field programmability is the watchword.
- Stainless steel construction. High quality stainless steel construction means security, and low maintenance. This machine isn't going to rust or corrode.
- Accepts bank credit cards. Bank credit cards are accepted by Secom Pay on Foot Machines. Authorization is fast and receipts are generated to give the customer a complete transaction record.

The US money system, one which is paper money based and not coin based, meant that to be accepted, the machine had to give change in banknotes as well as coin. In the early days this meant that the cost of a single unit could be very high. However as money handling machines evolved and the use of money dispensers became common, the technology came into the reach of the parking market.

The Secom Pay on Foot machine has all the features needed to meet the requirements of customers used to easy parking operations. Insert the ticket, a fee is displayed. Then pick your payment method, cash, credit card, debit card, prepaid company card. Use one of three validation programs (see literature on Secom Validation Systems), get change and receipts, communicate with a central office if you have a problem, then take your ticket to the exit and drive out.

The entire transaction is captured on-line and in real time at the central system, and auditing is exact. No lost data, no unaccounted for tickets, no lost money. Convenience, reliability, and auditability. That's what Secom's Pay on Foot is all about. Plus the machine can calculate any rate that can be described. Period.
